How Juniper SRX1500 Enhanced Security and Performance for BESCOM's Branch Offices

BESCOM, a major electricity distribution company, faced significant challenges with outdated SSG devices at their branch offices. Datacipher provided a comprehensive solution using Juniper SRX1500, enhancing network security and performance across their operations.

Challenge

Outdated Network Security Infrastructure

BESCOM's branch offices were using outdated SSG devices that could not support modern security requirements and higher traffic loads, leading to security vulnerabilities and performance issues. These challenges had been ongoing for over six months, affecting overall network security and performance.

SOLUTION

Juniper SRX1500 with Next-Generation Firewall Capabilities

Datacipher implemented Juniper SRX1500 devices to replace the outdated SSG infrastructure at BESCOM's branch offices. The solution featured improved security, high-performance processing, and easy management.

Implementation Process

› **Assessment:** Conducted a thorough assessment of the existing SSG infrastructure at branch offices.

› **Migration Plan:** Designed a detailed migration plan to replace SSG devices with SRX1500.

› **Deployment:** Deployed and configured SRX1500 devices at each branch office.

› **Configuration Migration:** Migrated configurations and policies from SSG to SRX1500.

› **Testing:** Conducted post-deployment testing to ensure proper functionality and performance.

Challenges and Overcoming Them

› **Seamless Transition:** Ensured minimal disruption to branch operations through detailed planning and phased implementation.

› **Configuration Management:** Managed migration and compatibility issues through extensive testing and adjustments.

OUTCOME

Enhanced Security and Network Performance

Immediate Changes/Benefits:

> **Improved Security:** Significant enhancement in network security and performance.

> **Easier Management:** Simplified management of branch office networks.

Integration with Existing Systems: The new SRX1500 devices integrated smoothly with existing network management systems and security policies.

Impact Metrics:

> **Security Incidents:** Reduced by 60%.

> **Network Performance:** Improved by 35%.

Client Satisfaction and Future Plans BESCOM expressed high satisfaction with the improved security and performance. They plan to implement SRX1500 devices at additional branch offices and explore further security enhancements.

Conclusion

BESCOM faced significant challenges with outdated SSG devices that led to security vulnerabilities and performance issues. By implementing Juniper SRX1500 devices, Datacipher provided a solution that dramatically improved network security and performance, ensuring a seamless transition and integration with existing systems.

For further guidance and customized network security solutions, reach out to Datacipher. Our experts are equipped to help you enhance your network infrastructure, ensuring optimal performance and security.
